

Design Flows

Design Flow pages are intended to be a collection of feature and resources targeted towards a specific design type. These are features, capabilities, examples, and other utilities that designers doing a certain type of design are likely to find useful. Explore these pages to understand why the AWR Design Environment is the best tool for each design type. It is important to note that these pages are fairly new and are still under construction. As more content is developed and curated, more Design Flow pages will become available.

Power Amplifier Design Flow

The following topics are discussed on the power amplifier landing page:

- [Load-pull](#)
- [Simulation](#)
- [EM analysis](#)
- [Statistical Analysis](#)
- [Re-design flow](#)
- [Stability analysis](#)
- [Examples](#)
