

Find All the Cells Contain the Name Cell

To run this script

Select **Scripts > Layout > Find_Where_GDSII_Cell_is_Used** from the Menus.

Or, in versions that support the script, you can run the utility directly from this page using this button.

Description

This script can be used when changing a GDSII cell name to verify the change won't break the places it is used.

This script will prompt for the name of a GDSII cell and then look through cell libraries and find all the cells that use the named cell. This script can also look through all the schematics and generate a list of locations where the cell has been used when the Search schematic elements as well as cell libraries option is selected.
