

# Save Results After Simulation

## To run this script

Select **Scripts >Simulation > Save\_After\_Simulate** from the Menu.

Or, in versions that support the script, you can run the utility directly from this page using this button.

## Description

This script allows the user the ability to either save or save and shut down the AWR design environment when a simulation is complete. This script is useful for users to be sure that their data is saved after a long simulation. After you run the script, it will open up a dialog window to ask the user whether to close AWRDE after simulation is complete.
