

Find and Display Command Names

To run this script

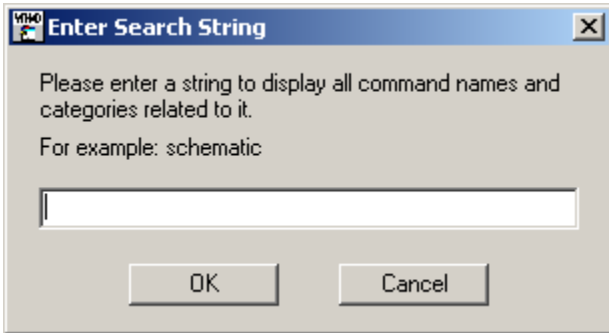

Select **Scripts >Project > Find_Command_Names** from the Menu.

Or, in versions that support the script, you can run the utility directly from this page using this button.

Description

When customizing the AWRDE (toolbars, menus or hotkeys), you need to know the category and name of a command. This script searches all the commands that match the name entered to help narrow down the search.

This utility displays all system command names and categories matching a user search string.

It will create a data file named "Find Command Results" in your current project with the results.
