

Check to See If There is an Update for the Project's PDKs

To run this script

Select **Scripts > PDK > PDK_Version_Checker** from the Menu.

Or, in versions that support the script, you can run the utility directly from this page using this button.

Description

This script goes through the user's PDKs loaded in the project and records the version number. Then it goes through our AWR PDK Availability under AWR Web Site vendor libraries and see if there is a newer PDK available and informs the user. Below is an example where the project is using TQOR_TQP15 v1.0.0.0 and after running the script, the script informs the user there is a v1.0.7.1 available.
